

FIGARO HOME

You don't need to learn AI. You need it working.

A done-for-you AI assistant for business owners,
set up around one real workflow in your
business.

**£550 once for Figaro Home and onboarding £99 a month
for the operator**

FIGARO FOR OWNER LED BUSINESSES

The work still lands back on the owner

You have seen the demos and tried the tools. The market is moving, but most products still ask you to learn prompts, connect systems and supervise another setup project.

The gap

- Explain the context again
- Move the answer between apps
- Check whether the work is right
- Finish the consequential step yourself

One message becomes a completed workflow

01

You send a normal message

“Compare our closest competitors, tell me what changed and draft the customer follow-up.”

02

Figaro does the work

Checks current sources, records the links, writes the brief and prepares the email.

03

The result is ready

You receive the competitor brief and the customer email draft in the same job.

04

You make the decision

Review the draft before anything is sent to the customer.

FIGARO PREPARES

YOU APPROVE

A working day with Figaro

08:30 Start with a short brief

Calendar, important messages and open work in one view

10:15 Send one real job

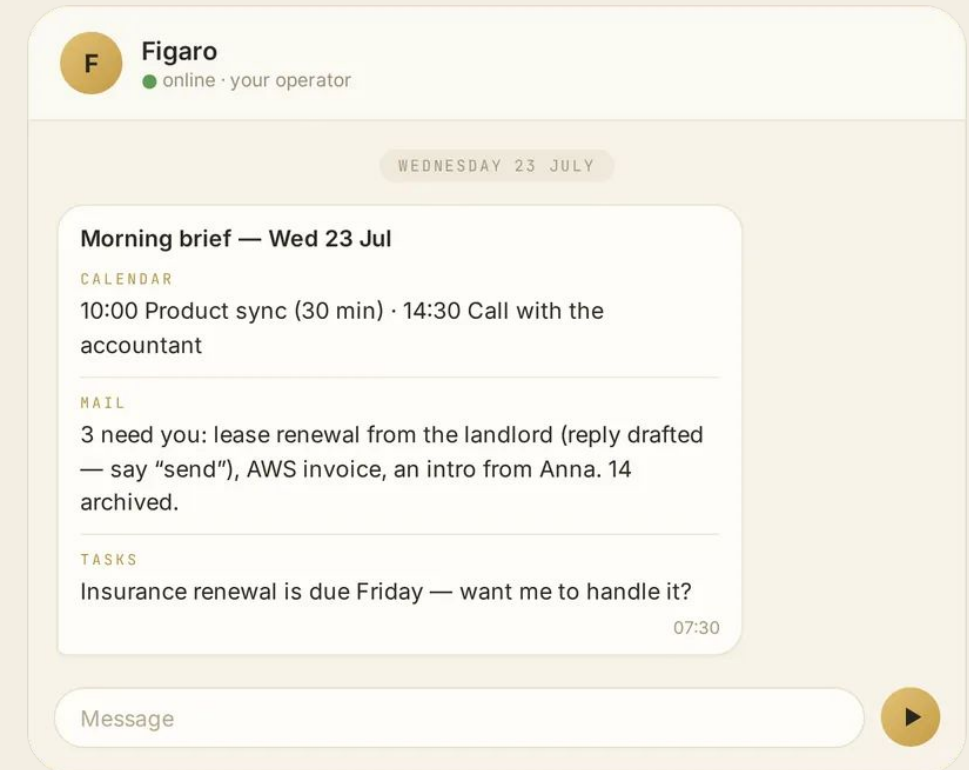

A competitor check, meeting follow-up or first draft

15:40 Get the result and evidence

What Figaro did, what it found and what still needs you

17:45 Approve the consequential step

Sending, publishing, spending and merging stay with you

Start with the jobs that cost attention

Research and follow-up

A sourced competitor brief with a customer email draft

Meetings and documents

Notes, decisions, next steps and an updated document

Inbox and calendar

A morning summary, prepared replies and the day's blockers

Product and code

A tested change ready for review before anything merges

Phone workflows

A prepared booking or call that runs after approval

Content and growth

A draft, creative or campaign prepared for review

Begin with one agreed workflow. Expand only after it works reliably.

Consequential actions wait for your tap

Figaro can prepare

Read
Research
Draft
Plan
Build in a sandbox

You approve

Call

Every job leaves a receipt of what happened.

Useful context carries forward

Figaro keeps the operating context that a chat window usually drops

Projects and people

The work, the relationships and the commitments around it

Corrections and outcomes

What you accepted, rejected or changed

Rules and preferences

How you want the business to operate and communicate

Recorded receipts

What ran, what it produced and what required your decision

A dedicated place for Figaro to run

Figaro Home stays on in your home or office and gives the operator a stable place to work around the clock.

- 01 Chat history, files, memory and connector tokens stay on the machine
- 02 Model calls go to Anthropic under your own API key
- 03 The box needs power, internet and the model connection
- 04 Provisioning, updates and support come with Figaro

Proof from the reference deployment

29 August to 23 September 2026

1,212

pull requests merged

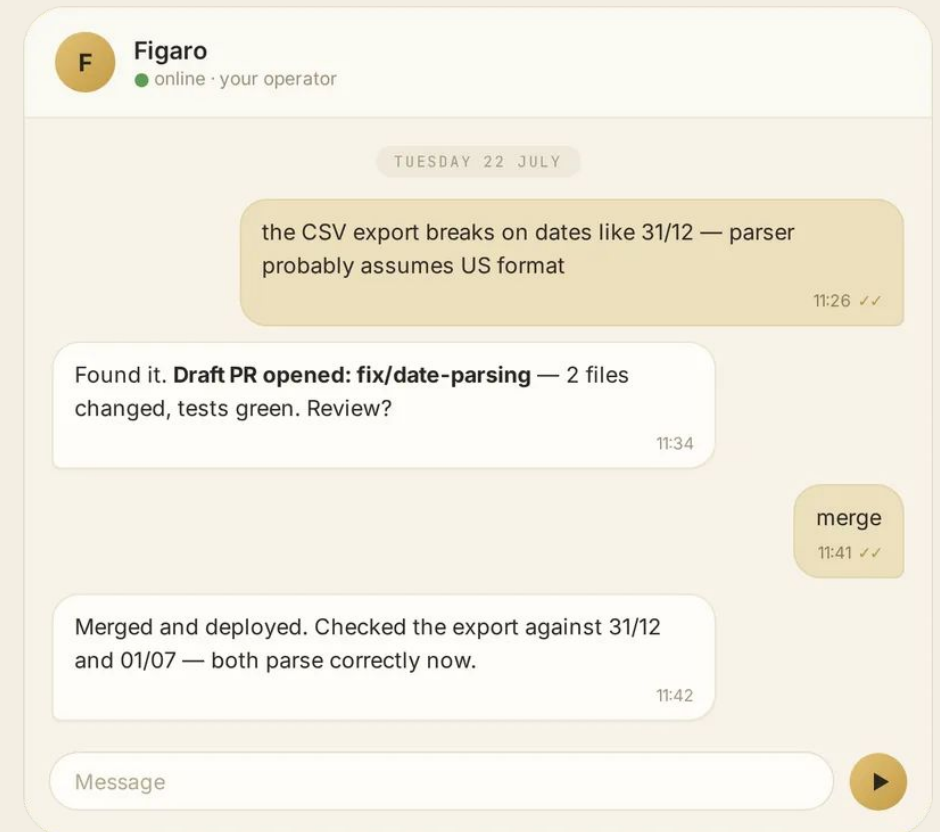

900

opened by Figaro
coding workers

1

revert in the period

This is proof of the operating model, not a performance guarantee for every client workflow.

Onboarding begins with one real job

- 01 Choose the workflow** Name the job and define what finished means
- 02 Connect only what it needs** Start with the smallest useful set of accounts and tools
- 03 Agree the approval boundary** Decide what can run and what must wait for your tap
- 04 Run and review** Check the receipt, fix the workflow, then expand when it is reliable

The setup call should end with a clear scope and something useful already moving.

Where Figaro fits

	Chat model	DIY agent runtime	Figaro
Primary job	Answer a question	Build and run agents	Finish repeatable business workflows
Who configures it	The user	A technical owner or team	Set up with you and maintained by Figaro
Context and evidence	Session or project context	Configurable	Operational context, approval steps and receipts
Best fit	One-off thinking	Teams willing to maintain the stack	Owner-led businesses that want a managed setup

Figaro adds the operating layer around strong models and connected tools.

Price and running cost

£550 once

Figaro Home
Delivery included
White-glove onboarding

£99 a month

Operator software
Updates and support
Works on your own Anthropic API key

Anthropic bills model usage separately. A £20 refundable reservation is available. The delivery window is confirmed before a reservation balance is due.

Built from an owner's own bottleneck

When every decision and follow-up returns to the owner,
growth creates more coordination instead of more
leverage.

**Figaro is built around that bottleneck: completed work, a visible receipt
and owner approval where judgment matters.**

The product runs on the same reference deployment that builds Figaro and its
go-to-market material.

Choose the first job you want gone

Tell us what keeps following you into the evening. We will map the first Figaro workflow around it and say plainly what can run now.
